**Disclosures**

- I have NONE!

2022 SAMBA ANNUAL MEETING • MAY 11 – 14, 2022

2

**Learning Objectives**

**SOCIETY FOR  
SAMBA  
AMBULATORY  
NESTHESIA**  
Outpatient • Office Based • Non-Operating Room  
www.SAMBAhq.org

- Identify early characteristics and recommend a process for rapid identification of pediatric emergencies including local anesthesia toxicity, operating room fire, anaphylaxis, and airway obstruction
- Review life-threatening emergencies and their management at Ambulatory Surgery Center
- Identify and update knowledge on current guidelines for the management of pediatric emergencies

2022 SAMBA ANNUAL MEETING • MAY 11 – 14, 2022

3

**SOCIETY FOR  
SAMBA  
AMBULATORY  
NESTHESIA**  
Outpatient • Office Based • Non-Operating Room  
www.SAMBAhq.org

**Pediatrics at ASC**

- 22.5 million procedures and surgeries were performed at ambulatory surgery centers. less than 1% transfer rate!
- Increasing number of pediatric cases at Ambulatory Surgery Centers
- Pediatric anesthesiology is inherently higher risk than adult anesthesia due to differences in the physiology in children
- Anesthesia providers performed most of these cases without specialty training in pediatric

2022 SAMBA ANNUAL MEETING • MAY 11 – 14, 2022

4

**Emergency**

**SOCIETY FOR  
SAMBA  
AMBULATORY  
NESTHESIA**  
Outpatient • Office Based • Non-Operating Room  
www.SAMBAhq.org

- Despite proper staffing, equipment and careful patient selection
- Can cause serious disruption to a surgical schedule
- Advances in anesthetic care are allowing more complex cases and patients with comorbidities
- Limited staff and resources, make ASC's more vulnerable to inadequate response

2022 SAMBA ANNUAL MEETING • MAY 11 – 14, 2022

5

SAMBA  
AMBULATORY  
NESTHESIA**  
Outpatient • Office Based • Non-Operating Room  
www.SAMBAhq.org

**Local Anesthetic Systemic Toxicity (LAST)**

- Ramesh and Boretsky discovered that 68% of LAST events occurred under general anesthesia
- Children less than 3 years old make up 71% of the reported pediatric LAST cases
- Highest reported blocks being penile, caudal, and local infiltration
- Bupivacaine was used in 67% of the reported LAST cases

2022 SAMBA ANNUAL MEETING • MAY 11 – 14, 2022

6

## LAST Diagnosis

• Classically neurologic signs precede the cardiovascular signs, but not always

• CNS: apnea, seizure, altered level of consciousness

• CV: EKG (wide QRS, ST segment changes, peaked or inverted T), significant bradycardia, asystole, v tach, hypotension, cardiac arrest

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA  
www.SAMBAhq.org

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

7

## LAST Treatment

- Request Intralipid kit
- Secure airway, ventilation with 100% oxygen, Confirm & monitor EKG, BP, and SaO2
- Seizure treatment: Midazolam 0.05-0.1 mg/kg IV
- Treat hypotension with small doses of Epinephrine 1 mcg/kg

**Intralipid Dosing**

- Bolus Intralipid 20% 1.5 mL/kg over 1 min
- Start infusion 0.25 mL/kg/min
- Repeat bolus every 3-5 min up to 4.5 mL/kg total dose until circulation is restored
- MAX total Intralipid 20% dose: 10 mL/kg over first 30 min

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA  
www.SAMBAhq.org

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

8

## Recommendations

- Utilize ultrasound
- Lowest effective dose of LA
- Incremental injections and frequent aspirations
- Full monitors for >10 minutes after the nerve block
- Ultrasound will not eliminate the risks due to artifacts and loss of needle visualization

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA  
www.SAMBAhq.org

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

9

## Anaphylaxis in children

- Anaphylaxis is a systemic allergic reaction of sudden onset after exposure to an allergen
- The incidence of anaphylactic reactions is less than the adult population with an incidence of 1:37000 pediatric anesthetics
- Antibiotics, Neuromuscular blocking agents, Chlorhexidine, and latex are the most frequently cited triggers

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA  
www.SAMBAhq.org

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

10

## Clinical Features

- I (Mild) Cutaneous signs
- II (Moderate) Measurable but not life-threatening symptoms
- III (Life threatening) Life threatening symptoms: Severe hypotension, tachycardia or bradycardia, arrhythmias Bronchospasm, high airway pressure
- IV (Cardiac arrest) Cardiac and/or respiratory arrest Most commonly presents as pulseless electrical activity

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA  
www.SAMBAhq.org

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

11

Symptoms	Differential diagnoses
Cutaneous signs: Hives, flushing, erythema, urticaria, angioedema	Direct histamine release Venous obstruction Head down position C1-esterase deficiency Mastocytosis Cold-induced anaphylaxis Hypovolemia Peripheral vasodilation by drugs/ neuraxial blockade Sepsis Embolism: thrombotic, air, amniotic Vasovagal Cardiogenic shock Circuit malfunction Misplaced/kinked airway device
Hypotension	Tension pneumothorax Asthma/Bronchospasm Airway foreign body Aspiration
High airway pressure/Respiratory compromise: Wheeze, stridor, dyspnea	Australia and New Zealand College of Anaesthetists, Resuscitative Anaphylaxis Management Guidelines

SOCIETY FOR  
**SAMBA**  
OBSTETRIC & OFFICE BASED NURSING ANESTHESIA

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

12

**Management of Anaphylaxis**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

- Timely recognition, removal of triggering agent, and administration of fluid and epinephrine are the mainstays of treatment
- Arrange for transfer to a hospital with the potential for recurrence even if the initial episode has been treated satisfactorily
- Refer to a specialized anesthetic allergy testing center for follow-up

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

13

**SPA Pedi Crisis**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

**Anaphylaxis**

- Increase O<sub>2</sub> to 100%, evaluate ventilation
- Remove suspected trigger(s)
- If latex is suspected, thoroughly wash area
- If HYPOtensive, turn off anesthetic agents

**Common causative agents:**

- Neuromuscular blockers
- Latex
- Ether/Desidine
- IV colloids
- Antibiotics

**Indications**

- To restore intravascular volume: NS or LR, 10-30 mL/kg IV/IO, **rapidly**
- To increase BP and reduce mediator release: EPINEPHrine 1-10 MICROgrams/kg IV/IO, as needed or 10 MICROgrams/kg IM q5-15 min as needed
- May need EPINEPHrine infusion 0.02-1 MICROgrams/kg/min IV
- If BP remains low, give Vasopressin 10 MILLIunits/kg IV
- To reduce histamine-mediated effects: DiphenhydRAMINE 1 mg/kg IV/IO (MAX 50 mg) or Famotidine 0.25 mg/kg IV (MAX 20 mg)
- To reduce mediator release: MethylPREDNIsolone 2 mg/kg IV/IO (MAX 100 mg)
- To reduce bronchoconstriction: Albuterol (Beta-agonists) 4-10 puffs, repeat as needed

**Treatments**

- Send bypass within 3 hours
- Consider Diflunisal (Dantrolene)
- Severe bronchospasm from URI or underlying condition: go to 'Bronchospasm' card
- Air, fat, thrombotic, or cement embolus: go to 'Air Embolism' card
- Sepsis: support BP, antibiotics

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

14

**Operating Room Fire**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

- 650/year
- Media attention and increasing number of surgical liability claims
- 8% of fires in <16yrs

**Common Fuels in the OR:**

- Alcohol skin preps
- Drapes/Gowns
- Gauze/Sponges
- Patient's Hair/Skin
- ETT, Nasal Cannula
- Intestinal Gases

**OR Ignition Sources:**

- Electrosurgical units e.g., "Bovie"
- Lasers
- Fiberoptic light source
- Drills/High-speed Burrs
- Defibrillators

**Oxidizers in the OR:**

- Oxygen
- Nitrous Oxide

Jones et al, Anesthesiology 2019; 130:492-501

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

15

**Annual incidence of operating Room Fires Surgical Devices**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

Year	Incidence of Fires
2006	~10
2007	~18
2008	~20
2009	~18
2010	~12
2011	~18
2012	~16
2013	~18
2014	~10
2015	~42
2016	~32

Anesthesiology. 2019;130(3):492-501. doi:10.1097/ALN.0000000000002598

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

16

**Surgical Fires**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

**Equipment involved**

- 70%: Electrosurgical device
- 10%: Laser
- 20% Other: Fiberoptic light source, defibrillator, high speed burrs, etc.

**Oxidizer and fuels**

- 75%: Oxygen enriched atmosphere
- 4%: Alcohol based prep solutions

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

17

**Comparison of Alcohol vs. Non-Alcohol-based Preps**

SOCIETY FOR OPERATORY NESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

Drying Time	Non-Alcohol-based Fires	Alcohol-based Fires	Pvalue
None	0% (0/40)	22% (13/60)	<0.001
3 min	0% (0/40)	10% (6/60)	0.08

All fires with the alcohol-based prep were ignited after the "drying time" with a 2-s activation of a standard monopolar "Bovie" pencil. No fires were ignited with a non-alcohol-based prep. Reproduced from Jones et al.<sup>62</sup>

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

18

**Operating Room Fires**

SOCIETY FOR OPERATORY ANESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

- Tonsillectomy, Eye surgery, and Head Neck surgery
- Monitored Anesthesia Care
- Fire risk assessment during surgical timeouts
- Complete elimination of fire risk is impossible as these components are key to a successful surgery

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

19

**Prevention Strategy**

SOCIETY FOR OPERATORY ANESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

- Fraction of inspired oxygen (FiO<sub>2</sub>) less than 30% for any open delivery system
- Avoid nitrous oxide
- Use a sealed gas delivery system-cuffed endotracheal tube (ETT)
- Flammable skin prep must dry before draping
- Minimize drapes around the airway
- Gauze and sponges moistened
- Close communication between surgeon and anesthesiologist
- Monitor inspired and exhaled oxygen
- For laser procedures, use a laser-resistant tracheal tube and cuff filled with saline or indicator dye

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

20

**Fire in the Airway**

SOCIETY FOR OPERATORY ANESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

*For a fire in the airway or breathing circuit, ASAP:*

- Remove the tracheal tube
- Stop the flow of all airway gases
- Disconnect breathing circuit
- Remove all flammable and burning materials from airway
- Pour saline or water into the patient's airway

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

21

**Fire in the Airway**

SOCIETY FOR OPERATORY ANESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

*After the airway or breathing circuit fire is extinguished:*

- Reestablish ventilation by mask
- Avoid supplemental O<sub>2</sub> & N<sub>2</sub>O, if possible
- Extinguish and examine ETT to assess for fragments
- Consider rigid bronchoscopy to assess injury & remove debris

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

22

**Non-Airway Fire**

SOCIETY FOR OPERATORY ANESTHESIA  
Department of Office Based Non-Operating Room  
[www.SAMBAhq.org](http://www.SAMBAhq.org)

*For a fire elsewhere on or in the patient, immediately*

- Stop the flow of all airway gases
- Remove all drapes, flammable and burning material from the patient
- Extinguish all burning materials in, on or around the patient with saline or water
- Assess for smoke inhalation injury if patient not intubated

ASA Practice Advisory for the Prevention & Management of OR Fires. Anesthesiology 2013; 118 (2): 271-90

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

23

**Fire Management:**

Early Warning Signs of Fire<sup>5</sup>

HALT PROCEDURE: Call for Evaluation

ASA Practice Advisory for the Prevention & Management of OR Fires. Anesthesiology 2013; 118 (2): 271-90

**AIRWAY<sup>6</sup> FIRE: IMMEDIATELY, without waiting**

- Remove mask
- Stop the flow of all airway gases
- Remove sponges and any other flammable material from airway
- Pour saline into airway

**NON-AIRWAY FIRE: IMMEDIATELY, without waiting**

- Remove drapes and all burning and flammable materials
- Extinguish burning materials by pouring saline or other means

**IF FIRE IS NOT EXTINGUISHED on First Attempt**

- CO<sub>2</sub> fire extinguisher

**IF FIRE PERSISTS:** activate fire alarm, evacuate patient, close OR door, and turn off gas supply to room

**Fire out**

**Re-establish ventilation**

- Avoid oxidizer-enriched atmosphere if clinically appropriate
- Examine tracheal tube to see if fragments may be left behind in airway
- Consider bronchoscopy

**Fire out**

**Maintain ventilation**

- Assess for inhalation injury if the patient is not intubated

Assess patient status and devise plan for management

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

24

**Laryngospasm**

- Reflex glottic closure due to activation of glottic musculature
- Usually activated during the excitation stage (Stage 2) of general anesthesia
- Protective airway mechanism
- Paradoxical motion of chest wall and abdomen

**When Does Laryngospasm Occur?**

Schreiner M: Anesth 85:475-80,1996

- -Induction 72%
- -Emergence 23%
- -Other 5%

Flick R: Ped Anesth 18:289-96,2008

- -Induction 46%
- -Emergence 44%
- -Maintenance 10%

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

25

26

**Laryngospasm: Is it really a crisis??**

**Pediatric Closed Claims Database (CCDB)**

- *Airway obstruction including LS was the most common respiratory event*

**Pediatric Perioperative Cardiac Arrest (POCA) Registry**

- *LS was the most common respiratory cause of Anesthesia Related Cardiac Arrest (ARCA) (11/53 = 21%)*

**Laryngospasm: Risk Factors**

- Age
- Prematurity
- URI
- Comorbidities
- Airway surgery
- Inexperienced provider
- Environmental smoke

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

27

29

**Laryngospasm Risk Factors: URI Symptoms**

Bronchospasm	Laryngospasm		All complications

Data are relative risk compared with no symptoms (85% CI, p value). p values that are no longer significant after correction by the step-down Bonferroni method are indicated. For all other p values after correction, see webappendix 8. <sup>a</sup>p<0.95 after correction. <sup>b</sup>p<0.05 after correction. <sup>c</sup>p<0.57 after correction. <sup>d</sup>p<0.53 after correction. <sup>e</sup>p<0.66 after correction. <sup>f</sup>p<0.58 after correction.

Von Ungern-Sternberg Lancet 376:773-83, 2010

**Mitigate Risk Factors**

- Sevoflurane
- IV induction
- Use face mask when appropriate, over LMA or ETT

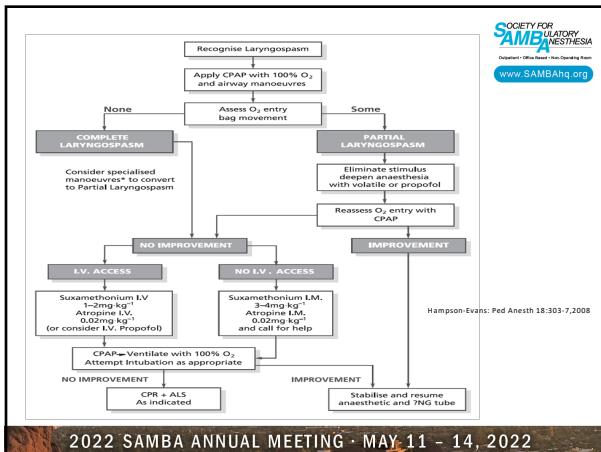

When ETT required:

- Insure adequate depth before DL with deep anesthesia
- Awake extubation

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

30

31

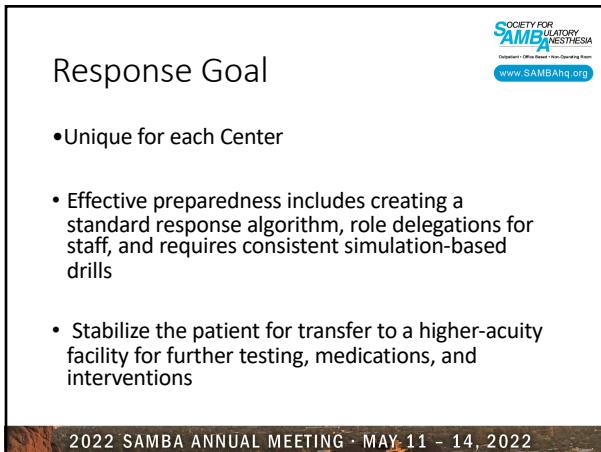

32

## Emergency Preparedness

- Preparation for emergencies in the ambulatory surgery setting is requirement for accreditation agencies
- Simulation-based training increases emergency response preparedness through practice using “real-life” scenario
- Crisis checklist, mobile app, cognitive aids, and emergency manuals

2022 SAMBA ANNUAL MEETING · MAY 11 – 14, 2022

33

34

## Recommendations

- Frequently scheduled simulation drills to optimize response to rare events
- Debrief, provide feedback, and performance evaluation
- Emphasize importance of communication, teamwork, and documentation
